# Keep Your Baby Lead *Safe*

Do you own property?  
Do you rent from a relative  
or a close friend? Are you  
pregnant or a new mother?

You may come in contact  
with lead every day in  
your home. If lead gets  
into your body it is  
poison and can harm  
you. It can even harm  
your baby if you are  
pregnant. Lead  
poisoning is very  
dangerous to  
children and  
pregnant women.

Lead poisoning can cause  
your baby to have:

- *brain damage/learning disabilities*
- *kidney damage*
- *hearing loss*
- *slow growth and development*

Learn to make your home safe and healthy  
for your baby through the “Keep Your Baby  
Lead Safe” Program.

The “Keep Your Baby Lead  
Safe” Program offers:

- Free home visits from nurses to  
answer questions about pregnancy  
and your baby’s health.
- Free information about how to protect  
your baby from lead poisoning.
- Connection to low-cost home repair  
programs that help homeowners and  
landlords make their properties lead  
safe. Eligible repairs may include  
replacing windows, removing lead-  
contaminated soil, and removing  
exterior and interior paint.

For more information about the  
“Keep Your Baby Lead Safe” Program, or to  
sign up today, please fill out the form on the  
back and mail it in the provided envelope to:

Childhood Lead Poisoning  
Prevention Program  
Rhode Island Department of Health  
Cannon Building  
3 Capitol Hill, Room 302  
Providence, RI 02908

*All children under six years of age  
should be tested for lead poisoning  
at least once annually.*
